# Colours

## Highlight

Create your design highlights!

12 DB and RAL basic colours are the basis of our WAREMA Colour World. We thus offer you selected standard colours which satisfy all current colour requirements. Furthermore select 5 surfaces in order to perfectly adapt the gloss level and structure to the corresponding structural condition.

## Variation

Make use of our colour variation!

Use the possibility of variation with another 50 RAL basic colours and 4 surfaces. This fulfils any of your architectural colour dream!

## Individual

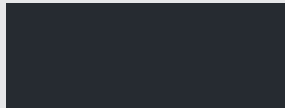

Make your individual trend!

180 additional colours complete the WAREMA Colour World.

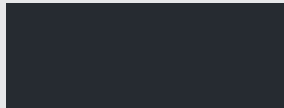

The colour samples have been produced by printing. Variations with regard to colour and gloss level reserved.

Satin finish

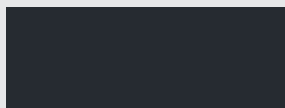

Matt

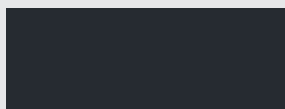

Fine structure

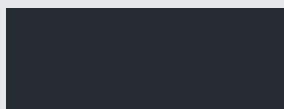

Highly weather-resistant matt

## Satin finish

Describes a not completely glossy surface in facade quality with smooth course and best light and weather resistance.

## Matt

Describes a powder coating in facade quality with smooth matt course and best light and weather resistance.

## Fine structure

A powder coating in facade quality with efficient effects which is characterised by the optimum light and weather resistance of the surface.

## Highly weather-resistant matt <sup>1)</sup>

Stands for a powder coating in special flood-resistant facade quality (HWF) with matt gloss level. The HWF coating is characterised by a clearly improved weathering behaviour with regard to gloss retention, weathering, chalking and colour stability.

## Highly weather-resistant fine structure <sup>1)</sup>

Defines a powder coating in special flood-resistant facade quality (HWF) in fine structure. The HWF coating is characterised by a clearly improved weathering behaviour with regard to gloss retention, weathering, chalking and colour stability.
